Do you have any concerns about having "AI" in the official title of your certificate? (For example: concerns about longevity, public perception, or professional reputation).

5 responses

No

Feel there is a certain stigma of AI being considered easy to use by public and will result in a bias when degree is viewed

No, as I believe AI will be more widely used as it is integrated into more products.

The example mentioned here about longevity is a concern. I think AI will become essential and a necessity for web development. However, it feels like it's also currently a "buzzword" in this era. The same way the word "digitize" or "cloud" or "smart" were used for everything at one point. I think eventually AI will fall into it's own category but I think it just needs to be handled carefully so it's not just simply a buzzword but a good descriptor of the degree.

Are there any specific courses, skills, or topics you would like to see included in this program?

How to use AI

Dangers of abuse of AI and how to properly use it as a tool as an individual and as a team

I think there should be more mention about the ethics of AI not just in education but also in our world. There's conversation about building AI data center's in deserts, carbon footprint, companies getting rid of entry level jobs for AI. More discussion on these ethical concerns can help students have more environmental awareness with their AI usage.

I'm not sure if a course would be necessary for this but maybe a week or two on it but how to remain competitive in a world that's moving towards AI tech. We see student graduates boo'ing mentions of AI at graduations around the country and I think there's a big reason for it: Fear and uncertainty from this still fairly new technology. I think it can be a great tool and asset for developers who know how to use it. However, it's also obvious that companies are looking for more and more qualified individuals while they're leaving easier tasks to AI (although this may change...hopefully). I think it's already being covered pretty well but it could be an entire optional course. Kind of like a "Careers in Tech" kinda class or something.
